\* Explanations and other special notes concerning the appropriate use of business performance forecasts (Notes on forward-looking statements)

Descriptions regarding the future, such as the forecast of financial results herein, are calculated based on the information which is available to the Company as of the date hereof. Please note that actual results may be different due to various factors such as subsequent changes in business environment. For assumptions underlying the forecasts and notes to the use of the forecasts, please refer to "1. Qualitative Information Relating to Consolidated Results of Operations for the First Three Quarters Ended December 31, 2019; (3) Explanation of Information on Future Forecasts, Including the Forecast of Consolidated Results" on page 8 of the "Accompanying Materials."

(How to obtain supplementary documents for quarterly results)

The Company will post supplementary documents for quarterly results at its official website immediately after announcing the results.

# 1. Qualitative Information Relating to Consolidated Results of Operations for the First Three Quarters Ended December 31, 2019

#### (1) Explanation of Financial Results

The Group ensures the Hands-on Approach and Customer-First Concept as its source and practices the three basic pillars of a manufacturer, that is, "reliably deliver the most environmentally friendly products of the highest quality at the most competitive prices whenever they are needed." In addition, the Group set "Balance" as the theme for 2020. The Group will aim to achieve both customers' prosperity and the growth of the Company in a well-balanced manner by developing products that cater to customers' needs and making proposals that lead to the solution of customers' issues. At the same time, the Group will proceed with initiatives for achieving a balance between the values in each sector, such as the balance between sales and profits and the balance between quality and productivity.

#### (Net sales)

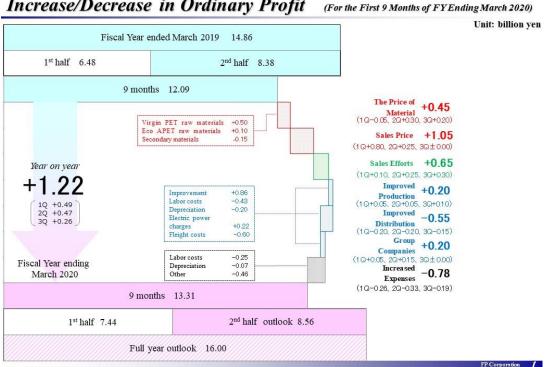

Net sales for the first nine months (from April 1 to December 31, 2019) of the consolidated fiscal year under review stood at 144,378 million yen, up 3,505 million yen or 2.5% year on year, marking a record high. This shows healthy progress toward the forecast figure for the fiscal year announced in *Consolidated Financial Results for the Fiscal Year Ended March 31, 2019* on May 8, 2019. During the first nine months under review, net sales of products manufactured by the Group rose 3.3% year on year to 110,427 million yen, while the sales volume of such products rose 2.9% year on year. Net sales of goods purchased from external parties remained flat from the year-ago level, at 33,951 million yen.

The Company's original products with specific functions have experienced strong sales, including microwavable products and ones with reduced  $CO_2$  emissions. In particular, demand for eco-friendly products has been growing due to rising environmental awareness among consumers. Examples of such products include Eco Tray, which our clients adopt proactively.

#### (Profits)

Operating profit for the first nine months of the consolidated fiscal year under review increased by 1,175 million yen or 10.1% year on year, to 12,810 million yen, and ordinary profit also increased 1,225 million yen (\*1) or 10.1% year on year, to 13,311 million yen. Ordinary profit before depreciation and amortization was 23,412 million yen, up 6.8% year on year, and profit attributable to owners of parent totaled 8,786 million yen, up 0.8% year on year. The profit figures showed healthy progress against the projected levels for the full fiscal year announced in *Consolidated Financial Results for the Fiscal Year Ended March 31, 2019* on May 8, 2019. With regard to factors for the increase/decrease of ordinary profit, profits increased thanks to the effects of the price revision that was implemented in response to the increase of raw material prices in the previous consolidated fiscal year and the strong sales of our original and new products, while we also saw an increase in costs including labor expenses, depreciation expenses, and logistics costs.

(\*1) Factor for the increase/decrease of ordinary profit for the first nine months under review

# Increase/Decrease in Ordinary Profit

#### (Sales activities)

The Group is speeding up the development and widening of lineups of high value-added products matched with consumers' lifestyles and increase product sales and the profit ratio.

Products that are being increasingly adopted include securely closed tape-free containers and containers with interior structures for fixed meals, which the Company proposed as containers for work improvement for coping with the labor shortage faced by food retailers. In addition, the Company receives a large number of inquiries about low-foaming PSP containers, which are lighter in weight while maintaining an attractive appearance, and appealing containers made by using fixed position molding technology to show the same patterns in the same positions. The Company introduced these products at the FPCO Fair 2019 held from March 27 to 29, 2019.

Namakara Sozai, which uses microwavable Multi FP containers, is positioned as a new way of selling products to ensure that the good flavor of raw ingredients appeals to consumers. The development of seasonal menus of Namakara Sozai is making progress at retailers and food manufacturers. Having been introduced on TV programs all over Japan and otherwise attracting attention since March 2019, Namakara Sozai has become a commonly seen product in selling spaces.

#### (Production)

In the production sector of the Group, improvement efforts were made, including skills improvement of operators, reduction of preparation time, improvement of the performance of manufacturing facilities, and improvement of metal molds and trimming dies. As a result, the number of shots per hour was improved by 13% compared to the level in the fiscal year ended March 31, 2008. The Company's molding plants around the country operate 73 pieces of automated equipment in 42 production process lines for the purpose of labor saving and the automation of the production process.

In addition, ten production plants of the Company had acquired FSSC 22000 food safety management certification as of December 31, 2019. The Company aims to increase the number of its certified plants to 21 by June 2020. Further, in the supply chain management system, the Company commenced AI-based sales forecasting for around 3,500 of its approximately 10,000 items in October 2019. The Company will increase the number of subject items to around 5,300 by March 2020 and strive to improve the precision and efficiency of the forecasting.

#### (Logistics)

Transportation unit prices continue to soar nationwide due to the heavy rain in Western Japan that occurred in July 2018, as well as the labor shortage in the transportation industry. The Group will strive to reduce logistics costs by increasing the ratio of use of its own trucks and improving the loading efficiency of each truck.

In addition, the Company began introducing unmanned carriers (automatic guided vehicles: AGVs) in August 2017 to streamline operations in the warehouse and to save labor. As of December 31, 2019, the Company has introduced 29 AGVs to seven locations in Japan. The Company also plans to introduce unmanned forklifts (automated guided forklifts) and accelerate initiatives for saving labor. In addition, the Company has increased the productivity of picking operations by introducing a voice picking system. It will proceed with other initiatives to ensure stable supply during peak periods.

With regard to transportation between distribution centers, all cargo handling operations, including loading and unloading products to and from trucks, were previously carried out manually. The Company began to undertake pallet transportation, or the loading of products placed on pallets onto trucks. This has enabled a significant reduction in the time taken for cargo handling. As of December 31, 2019, pallet transportation has been introduced to four routes. The Company will proceed to expand this method to other routes.

During the Golden Week holidays (late April to early May) and Bon holidays (mid-August) in the first nine months under review, when providers of consolidated cargo services suspended the services or restricted the collection of goods, the Company was able to deliver products and goods to customers without significant disruptions thanks to the preparations it had made for delivery by using its own trucks during this period.

In addition to the above, as part of our Business Continuity Plan (BCP), the Company has installed emergency power-generating equipment and the storage of sufficient fuel to secure an electricity supply for 72 hours, or three days, in 21 locations nationwide to ensure that operations for warehousing and shipping will be continued even in the event of serious incidents, such as an electricity outage caused by a disaster. In the natural disasters that occurred in 2019, including the typhoons, the Company remained able to deliver products and goods as usual by activating the emergency power-generating equipment. In December 2019, the Company obtained a loan based on its DBJ BCM rating in recognition of its initiatives for disaster prevention and business continuity.

#### (Workstyle reform initiatives)

The Group works to create a working environment that is friendly to workers in consideration of tasks in which employees with disabilities can play fulfilling roles, and strives to hire more workers with disabilities with a view to enhancing diversity. As of March 31, 2019, 13.6% of employees had disabilities in the FPCO Group.

In association with initiatives to expand women's occupational domains, to help women to remain employed, and to increase the number of women in managerial positions, the Company posted its *Positive Action* declaration on the Positive Action Portal operated by the Ministry of Health, Labour and Welfare. The Company set the target ratio of female employees for the main career track for 2019 and thereafter at 30% or more and the target number of female managers at 50 by 2022. The Company is implementing a range of initiatives to achieve these targets.

In addition to the above, the Company has put in place not only the flextime system but also a staggered working hour scheme under which the start and finish times may be shifted in a bid to broaden the working hour options and to press ahead with workstyle reform for reducing overtime work by encouraging employees to work intensively in busy time slots on their respective duties and thereby to improve work productivity. In addition, in the fiscal year ended March 2019, the Company began to require each employee to take paid leave of five consecutive days in an attempt to help refresh their mental and physical condition and enliven the workplaces.

In support for the employees' work environment, the Company provides Pico House No. 1 (Chikusei City, Ibaraki Prefecture; 150 units; completed in January 2017) and Pico House No. 2 (Wanouchi Town, Ampachi County, Gifu Prefecture; 102 units; completed in March 2017), company dormitories for single employees which have furniture and home appliances. In addition, the Company is planning to construct Pico House No. 3 (renovation of a bachelors' dormitory in Koga City, Ibaraki Prefecture; 63 units; to be completed in March 2020) and Pico House No. 4 (to be newly built in Fukuyama City, Hiroshima Prefecture; 18 units; to be completed in October 2020). In addition, the Company is constructing a group home for people with disabilities (20 units; planned to be completed in April 2020) to further improve the work environment for employees with disabilities.

(Initiatives aimed at realizing a recycling-based society)

The FPCO Group considers marine plastic waste and climate change as material issues to be tackled, and works to seriously address recycling throughout the Group.

In 1990, the Group embarked on circular recycling using the FPCO method with collection boxes at six collection points in supermarkets. Thanks to the understanding and cooperation of consumers, the number of used container collection points exceeded 9,300 as of December 31, 2019. Combined with the system for segregation and collection based on the Act on the Promotion of Sorted Collection and Recycling of Containers and Packaging that was established in 1997, the above voluntary initiative of the Company has taken root as social infrastructure for making effective use of used containers as resources.

To collect more used containers, the Group has created posters to promote recycling, which feature the celebrity LiLiCo. These posters say, "We will never say that they are disposable!!" and "Say 'No!' to disposal. Recycle them into containers." As of December 31, 2019, these posters are displayed in 7,274 stores of 202 supermarket companies. In addition, the Group is proactive in organizing tours to recycling plants at recycling bases all over Japan. Every year, around 20,000 people, including consumers and people from business partners, educational institutions, and administrative bodies, are invited to participate in the tours. The Group will continue to explain to more consumers that food containers are not disposable but can be recycled as valuable resources.

The percentage of sales of eco-friendly products (Eco Tray, Eco APET container and Eco OPET container) to the product sales of the Group reached 42% in the first nine months under review, up 5% year on year. The percentage of sales of eco-friendly products made from recycled PET materials (APET and OPET containers) reached 98% to sales of PET transparent containers.

To enable increased sales of ECO APET and ECO OPET containers made from recycled PET materials, the Company made a capital investment in Kanto Eco PET Plant in May 2019 to increase its capacity to produce recycled PET materials by around 2,000 tons per year. This has resulted in a new record of monthly production volume. In June 2019, Nishinihon PET-Bottle Recycle Co., Ltd., a consolidated subsidiary, made a capital investment to increase its capacity to produce recycled PET materials by around 5,000 tons per year. The new equipment began operation in October. Due to efforts to improve production efficiency as well as these capital investments, the Group's total capacity to produce recycled PET materials is expected to increase from approx. 50,000 tons per year to approx. 60,000 tons in the next fiscal year.

Given the growing concern over the marine plastic waste issue in recent years, the G20 Ministerial Meeting on Energy Transitions and Global Environment for Sustainable Growth was held in Karuizawa, Nagano Prefecture, on June 15 and 16, 2019. The Company was selected as an exhibitor at the G20 Innovation Exhibition, an outdoor exhibition that was hosted by the Government of Japan and held on the sidelines of the G20 Ministerial Meeting, and exhibited its Tray to Tray recycling (\*2). For people related to the G20 Ministerial Meeting and visitors to the event, the Company explained the advantages of Tray to Tray recycling, including the Eco Tray's effects of reducing  $CO_2$  emissions by as much as 30% compared to containers produced from virgin materials.

The Group's distribution of information about these recycling initiatives is highly rated by supermarkets, other users, and dealers of packaging materials. This has accelerated their proactive selection of environmentally friendly packaging materials, including Eco Tray.

Based on the idea that established recycling technologies and systems exist for products made of a single material, the FPCO Group considers the expansion and promotion of recycling as an effective measure for tackling the marine plastic waste and climate change issues, and it will implement the FPCO method of Tray to Tray and Bottle to Tray recycling. At the same time, the Group will continue collecting information about materials as alternatives to petroleum-derived plastics, such as paper and biomass, and promoting research and development of various recycling methods, by assuming that technologies will continue to progress. At the same time, the Group will develop industry-leading containers in terms of low environmental impact that feature environmentally friendly designs, with the aim of achieving a recycling-based society and building a sustainable society.

(\*2) FP Corporation selected as an exhibitor at the G20 Innovation Exhibition, introducing its recycling initiatives

(Initiatives on ESG and SDGs)

Measures taken by the Company include enhancement of initiatives related to supply chain management and human rights and disclosure of a wider range of information, in addition to circular recycling using the FPCO method and employment of disabled workers.

As a result of these initiatives, the Company was selected as a constituent of the FTSE4Good Index Series and FTSE Blossom Japan Index, which were developed by FTSE Russell, for the first time in June 2019. In addition, as of June 2019, the Company has continued to be selected as a constituent of the MSCI Japan Empowering Women (WIN) Select Index, which was established by MSCI Inc.

Further, the Company received the Excellence Award in the ESG category of The Japan Times Satoyama & ESG Awards 2019. Established in 2019 by The Japan Times, Ltd., this award program aims to commend companies and organizations that have made remarkable achievements in promoting and spreading the effective use of *satoyama* (woodlands near villages) and *satoumi* (a coastal area where biological productivity and biodiversity has increased through human interaction) in rural areas and ESG investments.

Moving forward, the Company will continue to accelerate its efforts to achieve the Sustainable Development Goals (SDGs) by implementing the FPCO method of recycling. Thus, the Company will enhance efforts to achieve a recycling-based society.

#### (2) Explanation of Financial Situation

#### 1) State of assets, liabilities and net assets

Consolidated assets at the end of the third quarter under review totaled 249,780 million yen, up 448 million yen from the end of the previous fiscal year. This was mainly due to an increase in accounts receivable - trade, which resulted from an increase in net sales, and a decline in property, plant and equipment, and intangible assets, which resulted from depreciation and amortization.

Consolidated liabilities amounted to 131,950 million yen, down 5,182 million yen from the end of the previous fiscal year. This is attributed mainly to an increase in notes and accounts payable - trade, which resulted from an increase in the purchase amount of raw materials and others, and a decline in interest-bearing liabilities, which resulted from the repayment of long-term loans payable.

Consolidated net assets totaled 117,829 million yen, up 5,631 million yen from the end of the previous fiscal year. This was attributable principally to profit attributable to owners of parent amounting to 8,786 million yen and dividends of surplus of 3,348 million yen.

#### 2) State of cash flows

Consolidated cash and cash equivalents (hereinafter "cash") at the end of the third quarter under review totaled 17,193 million yen, down 1,958 million yen from the end of the previous fiscal year.

(Cash flows from operating activities)

Cash provided by operating activities amounted to 16,463 million yen (17,747 million yen in cash was provided a year earlier). This reflected a cash increase due mainly to profit before income taxes of 13,034 million yen, depreciation of 10,101 million yen, an increase in notes and accounts payable - trade of 3,330 million yen, and a shrinkage in accounts receivable - other of 1,185 million yen, as well as a cash decrease following an increase in notes and accounts receivable - trade of 7,316 million yen and income taxes paid of 5,584 million yen, among others.

(Cash flows from investing activities)

Net cash used in investing activities reached 7,491 million yen (12,912 million yen in cash was used a year earlier).

It was due mainly to 7,235 million yen spent on the purchase of property, plant and equipment in connection with automation equipment and other production equipment.

(Cash flows from financing activities)

Net cash used in financing activities came to 10,930 million yen (2,628 million yen in cash was used a year earlier).

This primarily reflected proceeds from long-term loans payable of 5,000 million yen, repayment of long-term loans payable of 10,589 million yen, repayment of lease obligations of 2,009 million yen and cash dividends paid of 3,321 million yen.

(3) Explanation of Information on Future Forecasts, Including the Forecast of Consolidated Results

Takeaway food offered by restaurants continues to increase because the consumption tax rate imposed on such food has remained unchanged after the consumption tax hike in October 2019. With this background, FP Trading Co., Ltd., a consolidated subsidiary of the Company, opened the Pack Market, an e-commerce site offering packaging materials, on June 27, 2019. We strengthen merchandising of packaging materials by collaborating with Group companies and influential dealers of packaging materials in the respective regions. At the same time, we strengthen sales to small-scale customers who purchase small lots by using the IT and logistics infrastructures of the FPCO Group.

In addition, in July 2019, we began to collaborate with a major home delivery portal. In October 2019, we began to sell special containers for the delivery of noodles with soup. The soup is put into the main body of the new container, while the noodles are placed on the inner dish. This prevents the soup from leaking and keeps it hot during delivery, enabling the good flavor of products delivered to customers to be maintained. Further, it enables more containers to be delivered at one time, which we believe will contribute to improved delivery efficiency. We will continue striving to develop containers for the diversifying delivery menus.

Further, in July 2019, the Company began collaborating with a major healthcare food service company providing food services in hospitals and nursing-care facilities, as well as the restaurant industry. Specifically, the Company began to provide containers for special menus for a service called Minna-no Nichiyobi (Sunday for everyone), which is aimed at allowing people in hospitals and nursing-care facilities to experience the pleasure of eating out on Sundays. The Company offers containers for this service to make users feel as if they were eating at a restaurant.

The Company will continue to expand its business into the frozen food package market, a new market, by taking advantage of the cold and heat resistance to temperatures between -40°C and +110°C and the superior thermal insulation, which are the features of Multi FP containers as one of the Company's original products. By taking this and other measures, the Company will continue to develop products that will aid customers in improving the value of their products.

The Company introduced a new mission-critical system at FPCO International Package Co., Ltd., a consolidated subsidiary, in May 2019. This system has significantly improved operating efficiency, because it features specialized functions for the operations of packaging material dealers, such as supply chain management functions for controlling the number of orders placed and inventory and a function for placing orders with a smartphone, and it enables the Group to share information promptly. We are planning to gradually introduce this system to packaging material dealers in the FPCO Group.

The results forecasts for the full year that were announced in the Consolidated Financial Results for the Fiscal Year Ended March 31, 2019 on May 8, 2019 remain unchanged.

(Explanations of terms)	
Multi FP (MFP) container:	A formed PS (polystyrene) container with cold and heat resistance to temperatures between -40°C and +110°C and with superior oil and thermal insulation.
Eco Tray:	A recycled expanded polystyrene container for which polystyrene containers collected at supermarket shop counters and scrap pieces collected within plants are used as raw materials (sales commenced in 1992).
Eco APET container:	A recycled PET transparent container for which PET transparent containers collected at supermarket shop counters, PET (polyethylene terephthalate) bottles and scrap pieces collected within plants are used as raw materials. Heat resistance temperature of +60°C (sales commenced in 2012).
Eco OPET container:	A recycled OPET transparent container molded from the bi-axially oriented PET sheets, which use the same raw materials as an Eco APET container Superior oil resistance and high transparency, with the same thermal insulation as the OPS transparent container Heat resistance temperature of +80°C (sales commenced in 2016).
OPS transparent container:	A conventional transparent container molded from the bi-axially oriented polystyrene sheets. Heat resistance temperature of +80°C
